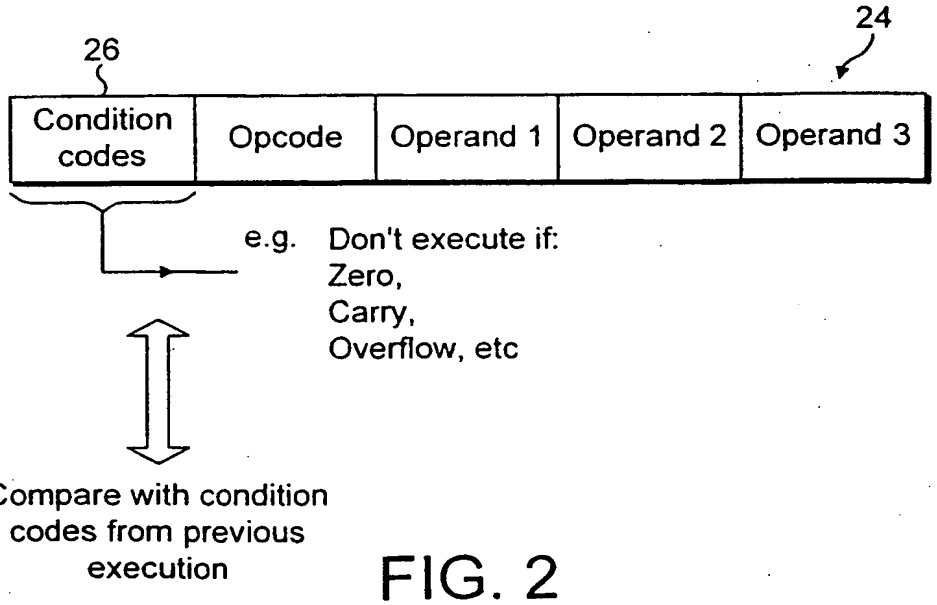
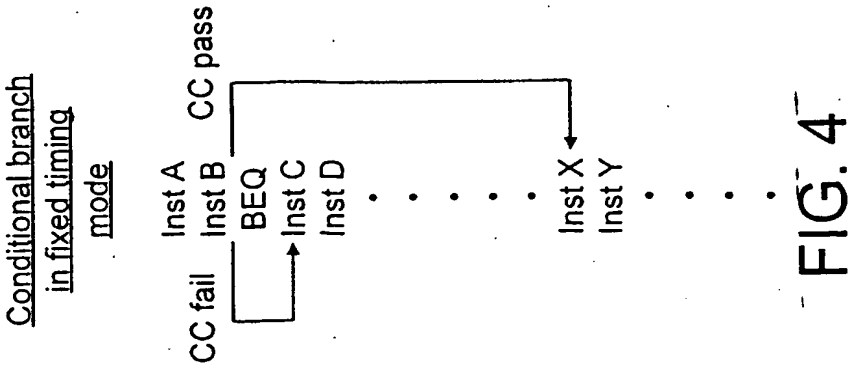
FIG. 1



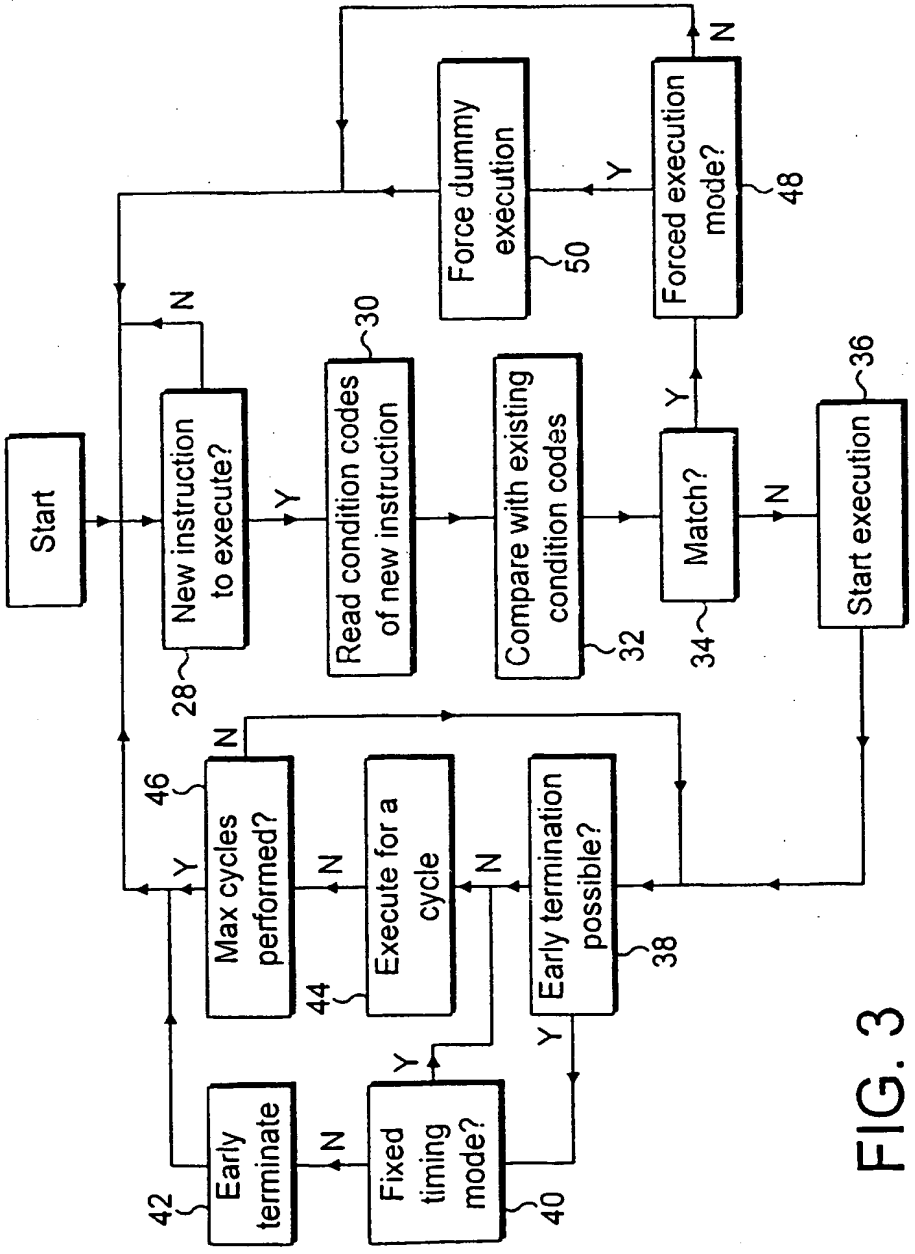
24
26
Condition codes
Opcode
Operand 1
Operand 2
Operand 3
e.g. Don't execute if:
Zero,
Carry,
Overflow, etc
Compare with condition codes from previous execution

FIG. 2



Conditional branch in fixed timing mode
Inst A
Inst B
BEQ
Inst C
Inst D
Inst X
Inst Y
CC pass
CC fail

FIG. 4



Start
New instruction to execute?
Read condition codes of new instruction
Compare with existing condition codes
Match?
Start execution
Force dummy execution
Forced execution mode?
Max cycles performed?
Execute for a cycle
Early termination possible?
Early terminate
Fixed timing mode?
